

Automotive Certification Scheme (ACS)

1. What is the Automotive Certification Scheme (ACS)?

The Automotive Certification Scheme (ACS) is an initiative by MARii that focuses on enhancing product and service quality within the automotive industry. It emphasises safety, defect prevention, and the reduction of variation and waste across the supply chain.

2. What is the main objective of the ACS Programme?

The programme aims to ensure continuous quality improvement and compliance with industry standards, while supporting Malaysia's automotive sector to remain competitive in line with Industry 4.0 and national policies such as the National Automotive Policy (NAP).

3. Who should participate in the ACS Programme?

The ACS Programme is designed for automotive industry players, particularly manufacturers, suppliers, and companies involved in producing automotive parts and components who want to meet recognised certification standards and improve quality assurance.

4. How does the ACS Programme improve safety and public well-being?

By ensuring that automotive parts and components are properly tested and comply with safety specifications, the programme helps eliminate unsafe vehicles from the road, ultimately reducing accidents, injuries, and loss of life.

5. How does the ACS Programme support environmental sustainability?

The programme promotes environmentally responsible practices, including reducing emissions, improving fuel efficiency, and encouraging the reuse of automotive components. It also aligns with Malaysia's sustainability goals and supports global initiatives such as the United Nations Sustainable Development Goals (SDGs).
