

Frequently Asked Questions (FAQ)

What is the DEP – CAE Programme?

The Digital Engineering & Prototyping (DEP) – CAE Programme is a specialised training and certification programme focused on simulation, analysis, and optimisation of product designs using advanced engineering software.

Who is this programme for?

This programme is designed for mechanical, automotive, and design engineers, as well as graduate engineers and industry professionals looking to enhance their simulation and analysis capabilities.

What will I learn?

Participants will gain hands-on experience in engineering simulation, including structural, thermal, and performance analysis—enabling faster design validation and improved product development processes.

What certification will I receive?

Participants can obtain industry-recognised certification, including pathways towards professional simulation credentials such as NAFEMS certification, depending on the course level.

How do I apply?

You can apply by completing the registration form on the programme page. Once submitted, shortlisted applicants will be contacted with further details on intake, schedule, and next steps.
