

## MARii ERP System for Total Resource Optimization (MAESTRO)

### 1. What is the MAESTRO Programme?

The MAESTRO (MARii ERP System for Total Resource Optimisation) Programme is an initiative by Malaysia Automotive, Robotics and IoT Institute (MARii) that provides an open-source business management platform. It enables companies to efficiently collect, process and analyze both financial and operational data for better decision making.

### 2. What are the key features of the MAESTRO system?

MAESTRO consists of five core modules and a dashboard, designed to support end to end business operations:

- i. Procurement
- ii. Selling
- iii. Accounting
- iv. Stock & Inventory
- v. Manufacturing
- vi. Centralized dashboard for insights

These modules help streamline processes and improve overall business performance.

### 3. Who should use the MAESTRO Programme?

The programme is targeted at automotive industry players and businesses seeking to digitalize and optimize their operations. It is especially beneficial for companies looking to enhance efficiency, improve data management and strengthen operational control.

### 4. What are the benefits of adopting MAESTRO for business?

Businesses can benefit from:

- i. Improved data driven decision making
- ii. Better integration of financial and operational processes
- iii. Enhanced efficiency and productivity
- iv. Greater visibility across business functions

Overall, MAESTRO supports companies in becoming more competitive and digitally driven.

5. How does MAESTRO support digital transformation in the automotive industry?

MAESTRO acts as a digital enabler, helping business transition towards smarter operations by leveraging integrated systems and analytics. This aligns with MARii's broader goal of strengthening Malaysia's automotive ecosystem through technology adoption and innovation.
