

Sistem Maklumat Automotif (SMAT)

1. What is the SMAT Programme?

The SMAT (Sistem Maklumat Automotif Terpakai) Programme is a digital initiative by MARii that provides a centralised information system for used vehicles. It enables better tracking, management, and transparency of automotive data, particularly for deregistered or end-of-life vehicles.

2. What is the main objective of the SMAT Programme?

The programme aims to enhance transparency and traceability within the automotive ecosystem, especially in the handling of used and deregistered vehicles. It supports data-driven decision-making and promotes a more structured and regulated automotive aftermarket industry.

3. Who should use the SMAT system?

SMAT is designed for:

- i. Automotive industry players
- ii. Vehicle dismantlers and recyclers
- iii. Aftermarket businesses and stakeholders

It is particularly useful for organisations involved in managing used vehicles and automotive lifecycle processes.

4. How does SMAT benefit the automotive industry?

The system helps to:

- i. Improve **data accuracy and accessibility**
- ii. Support compliance with regulatory requirements
- iii. Enhance efficiency in managing used vehicle information
- iv. Strengthen trust and transparency across the automotive value chain
- v. This contributes to a more organised and sustainable industry ecosystem.

5. How does SMAT support sustainability efforts?

SMAT supports sustainability by enabling better monitoring of vehicle lifecycle and disposal processes, ensuring that end-of-life vehicles are handled responsibly. This aligns with Malaysia's efforts to promote environmental responsibility and circular economy practices within the automotive sector.
